Decision Making and Leadership

Identifying Traps and Tactics for Success

Presented by **Justin G. Bull, PhD**

Leader, Sustainability and Ethics Group Sauder School
of Business, University of British Columbia

Hosted online using Zoom.

November 9, 2021 (12-2PM EST)

November 23, 2021 (12-2PM EST)

In a two-part workshop series, students will be exposed to common traps in decision-making and offer frameworks and strategies that will assist in preparing more effective and informed choices. In the first session, students will review common pitfalls in decision making, evaluate mitigation techniques, and have the opportunity to apply these learnings to examples from their own lives and careers. In the second session, students will work together to identify how to more effectively manage decision making in complex, high-stress environments. Using a classic case study that examines a failed expedition on Mt. Everest, students will learn how to make more effective choices at the individual, organizational and systems level.
